Chapter 1. Coherent, ultrafast and nonlinear spectroscopy

Coherent spectroscopy on semiconductors in the quantum kinetic regime
M.U. Wehner, M.H. Ulm, J. Hetzler, D. Steinbach, M. Wegener 1

Coherent phonon oscillations in photo-excited semiconductors and semimetals
S. Nakashima, K. Mizoguchi, H. Harima, K. Sakai 6

Collective coordinates for semiclassical femtosecond dissipative dynamics in Liouville space
V. Chernyak, S. Mukamel 15

Nonlinear–nonreciprocal spectroscopy of antiferromagnets
D. Fröhlich, M. Fiebig, St. Leute 22

Nonreciprocal optical responses of antiferromagnets Cr_2O_3
E. Hanamura, Y. Tanabe, T. Iizuka-Sakano, M. Muto 28

Observation of memory effects in electron–phonon quantum kinetics
R. Zimmermann, J. Wauer, A. Leitenstorfer, C. Fürst 34

Coherent transients at the Rabi frequency
S.A. Holmstrom, A.S.M. Windsor, C. Wei, J.P.D. Martin, N.B. Manson 38

Ultrafast spectroscopy of hole and exciton self-trapping in halide crystals
E.D. Thoma, H.M. Yochum, P.A. Sheldon, R.T. Williams 43

Ultrafast coherent vibronic dynamics in color centers
R. Scholz, M. Schreiber 48

Femtosecond proton transfer studies of 5,5′-dimethyl-[2,2′-bipyridyl]-3,3′-diol
D. Marks, H. Zhang, M. Glasbeek 52

Hydrogen bond dynamics in benzoic acid crystals
M.A. Neumann, S. Craciun, A. Corval, M.R. Johnson, A.J. Horsewill, V.A. Benderskii, H.P. Trommsdorff 56

Two-pulse photon echo studies of optical dephasing in $CaF_2 : Eu^{2+}$
D.M. Boye, S.P. Feofilov, R.S. Meltzer 60

Solvation dynamics of ionic dyes in the isotropic phase of liquid crystals
C. Ferrante, J. Rau, F.W. Deeg, C. Bräuchle 64

Dynamics of coherent plasmon–phonon coupled modes in GaAs using ultrashort laser pulses
M. Hase, K. Mizoguchi, H. Harima, F. Miyamaru, S. Nakashima, R. Fukasawa, M. Tani, K. Sakai 68

Quantum interference effect in linear and nonlinear optical processes in GaSe
Y. Mitsumori, T. Kuroda, F. Minami, A. Hasegawa 72

High precision measurement of biexciton dispersion at $k \sim 0$ in CuCl
H. Kawano, K. Okinaka, M. Hasuo, N. Nagasawa 75

Pump–probe spectrum in a correlated electron–hole system
T. Inagaki, M. Aihara 79

Ultrasound-induced echoes and quantum beats observed in the nuclear exciton decay utilizing synchrotron radiation
H. Jex, A. Ludwig, F.J. Hartmann, E. Gerdau, O. Leupold 83

Two-photon resonant emissions of 1s ortho-excitons in Cu_2O in a magnetic field
S. Kono, N. Nagasawa 86

Femtosecond transient absorption studies on photochromism of dithienylethene derivates
J. Ern, A.T. Bens, A. Bock, H.-D. Martin, C. Kryschi 90

Persistent spectral-hole burning in SiC : V via excited-state absorption
C. Hecht, R. Kummer, A. Winnacker 95

Photoluminescence and fast nonlinear optical response of barium titanate crystals
H. Liu, W. Jia 100

Magnetically enhanced exciton–exciton correlations in semiconductors
R. Lövenich, W. Schäfer, P. Kner, D.S. Chemla 104

Spatial propagation of quasi two-dimensional excitons in a layered crystal BiI_3 under the high-density excitation
H. Mino, T. Kawai, I. Akai, T. Karasawa 109

Coherent transients involving 2P excitons in ZnSe
Y. Mitsumori, M. Mizuno, S. Tanji, T. Kuroda, F. Minami 113

Up-conversion fluorescence of Er^{3+}- and Yb^{3+}-doped TeO_2-based oxide glass and single crystals
H. Nii, K. Ozaki, M. Herren, M. Morita 116

Ultrafast relaxation of photoexcited carriers in ZnSe/ZnMgSSe multiple-quantum wells
A. Nakamura, T. Mukai, Y. Manabe, I. Tanahashi 120

Quantum beats of confined excitons in CuCl nanocrystals
H. Ohmura, A. Nakamura 125

New possibilities of obtaining spectral holes narrower than natural line width
I. Rebane 130

Quantum kinetics for differential transmission spectra in GaAs with LO–phonon interaction
A. Schmenkel, L. Bányai, H. Haug 134

Direct observation of radiation locking using phase-sensitive detection
M.J. Sellars, N.B. Manson 137

Femtosecond luminescence of nonequilibrium carriers in InAs
T. Suemoto, H. Nansei, S. Tomimoto, S. Saito 141

Coherent transfer from fluorescence interference noise
V. Szőcs, H.F. Kauffmann 145

Determination of inhomogeneous broadening from the excitation profiles of CARS and CSRS
I. Tehver 147

Experimental study of the admixture of continuum states to the discrete excited state of EL2 in GaAs
R. Kummer, C. Hecht, M. Thoms, A. Winnacker 152

Temperature-dependent line broadening of chromophores in amorphous solids: Differences between single-molecule spectroscopy and photon echo results
S.J. Zilker, D. Haarer, Yu.G. Vainer, R.I. Personov 157

Chapter 2. Dynamics in excited states of artificially-structured nanomaterials

Biexcitons and dark states in semiconductor microcavities
V.M. Agranovich, G.C. La Rocca, F. Bassani 161

Functional nanostructures by organized macromolecular-metallic hybrid systems
J.P. Spatz, S. Mößmer, M. Möller, T. Herzog, A. Plettl, P. Ziemann 168

Dynamics of exciton recombination in low-dimensional heterostructures of II–VI semiconductors (CdTe/CdMnTe, ZnCdSe/ZnSe)
M. Godlewski 174

Homogeneous line widths of surface plasmons in gold nanoparticles measured by femtosecond pump-and-probe and near-field optical spectroscopy
M. Perner, T. Klar, S. Grosse, U. Lemmer, G. von Plessen, W. Spirkl, J. Feldmann 181

Time-resolved study of two-photon excitation of CuCl nanocrystals
K. Edamatsu, M. Tsukii, K. Hayashibe, T. Itoh, B.P. Zhang, Y. Segawa 185

Exciton–confined-photon interaction in quantum dots
Y. Masumoto, T. Kawazoe, N. Matsuura 189

Exciton localization hierarchy and directed energy transfer in conjugated linear aromatic chains and dendrimeric supermolecules
S.F. Swallen, Z.-Y. Shi, W. Tan, Z. Xu, J.S. Moore, R. Kopelman 193

Dendrimers as light harvesting antenna
A. Bar-Haim, J. Klafter 197

Photoluminescence of confined excitons in nanoscale C_{60} clusters
J.S. Ahn, K. Suzuki, Y. Iwasa, N. Otsuka, T. Mitani 201

Relaxation dynamics into two types of luminescence states in C_{60} single crystals below 80 K
I. Akimoto, J. Azuma, M. Ashida, K. Kan'no 206

Dynamics of exciton magnetic polaron in the $Cd_{1-x}Mn_xTe/ZnTe$ quantum wells
H. Okamoto, K. Egawa, M. Takahashi, Y. Oka 211

Hybrid excitons in organic–inorganic semiconducting quantum dots
A. Engelmann, V.I. Yudson, P. Reineker 214

Selective laser spectroscopy of RE^{3+} and Mn^{4+} in sol–gel technique produced Al_2O_3
S.P. Feofilov, A.B. Kulinkin, A.B. Kutsenko, R.I. Zakharchenya 217

Ultrafast relaxation dynamics of electrons in silver nanocrystals embedded in glass
Y. Hamanaka, N. Hayashi, A. Nakamura, S. Omi 221

Ultrafast relaxation processes of excitons in one-dimensional platinum complexes
S. Iwai, T. Kamata, K. Yamamoto, T. Fukaya, S. Murata, F. Mizukami, T. Ohta, M. Tachiya 226

Applicability of a one-dimensional model for studying the transfer of excitons in pyrene microcrystallites
A.H. Matsui, K. Mizuno, M. Takeshima 230

Spectral hole burning in crystalline Eu_2O_3 and $Y_2O_3:Eu^{3+}$ nanoparticles
K.S. Hong, R.S. Meltzer, B. Bihari, D.K. Williams, B.M. Tissue 234

Surface effects in luminescence and decay profiles of Cr^{6+}–V^{5+} and Cr^{6+}–Ag^{+} codoped nanostructured sol–gel SiO_2 glass
M. Morita, N. Miyazaki, S. Murakami, M. Herren, D. Rau 238

Highly excited luminescence in InGaN epitaxial films: Origins of the blue–green emission
F. Sasaki, S. Kobayashi, T. Tani, Y. Yamada, T. Taguchi, S. Nakamura, G. Shinomiya 242

Excitation dynamics of pyrenyl labeled polyallylcarbosilane dendrimers
M.I. Sluch, I.G. Scheblykin, O.P. Varnavsky, A.G. Vitukhnovsky, V.G. Krasovskii, O.B. Gorbatsevich, A.M. Muzafarov 246

Optical properties of $ZnS:Mn^{2+}$ nanoparticles in polymer films
J. Yu, H. Liu, Y. Wang, F.E. Fernandez, W. Jia 252

Quantum-size effects on the exciton excited states of CuCl nanocrystals
K. Yamanaka, K. Edamatsu, T. Itoh 256

Nonlinear dynamics of excitons in semiconductor microcavities
V.I. Yudson, P. Reineker 260

Chapter 3. Single-molecule spectroscopy, hole burning, and scanning probe microscopy

Fluorescence intensity fluctuations of single atoms, molecules and nanoparticles
T. Basché 263

Single-molecule spectroscopy, photon echoes, and hole burning in low-temperature glasses
J.L. Skinner, E. Geva 270

Non-linear optical spectroscopy of single molecules in solids at low temperatures
B. Lounis, F. Jelezko, M. Orrit 274

Temperature dependence of single-molecule line widths: Terrylene in *n*-alkane matrices
T. Irngartinger, A. Renn, G. Zumofen, U.P. Wild 279

Optical investigation of electric-field-induced relaxations in amorphous solids at low tempertures
B.M. Kharlamov, R. Wunderlich, H. Maier, D. Haarer 283

Stochastic dynamics of a laser-driven single molecule coupled to tunneling TLS from the viewpoint of the continuous measurement theory
S.Ya. Kilin, T.M. Maevskaya, A.P. Nizovtsev, V.N. Shatokhin, P.R. Berman, C. von Borczyskowski, J. Wrachtrup, L. Fleury 288

Non-resonant hole burning in CaS:Eu by photoinduced recharging of Eu ions
A.A. Kaplyanskii, S.A. Basun, M. Raukas, U. Happek, J. Rennie, J.C. Vial, W.M. Yen, R.S. Meltzer 292

Slow fluctuation in chromophore-solvent systems observed by time-resolved transient hole-burning spectroscopy
A. Kurita, K. Matsumoto, Y. Shibata, T. Kushida 295

Near-field optical microscopy: A numerical study of resolution and contrast
E. Paule, P. Reineker 299

Optical and piezoelectric shear-force controls designed for cryogenic environment
A. Débarre, A. Richard, P. Tchénio 303

Near-field Raman spectroscopy of semiconductor heterostructures and CVD-diamond layers
M. Goetz, D. Drews, D.R.T. Zahn, R. Wannemacher 306

Chapter 4. Dynamics in photosynthetic systems and pigment–protein complexes

Excitons and excitation transfer in the photosynthetic unit of purple bacteria
T. Ritz, X. Hu, A. Damjanović, K. Schulten 310

Persistent hole burning and femtosecond pump–probe absorption spectroscopy of green sulphur photosynthetic bacteria antennae
J. Pšenčik, P. Němec, T. Polívka, J. Kudrna, J. Dian, P. Malý, J. Hála 322

Glass versus protein dynamics at low temperature studied by time-resolved spectral hole burning
U. Störkel, T.M.H. Creemers, F.T.H. den Hartog, S. Völker 327

Exciton transfer in disordered molecular aggregates: Computer modeling of optical line shapes in ring bacteria antenna systems
I. Barvík, Ch. Warns, P. Reineker 331

Effect of various chemical agents on photosynthesis studied by the method of fluorescence induction
V.A. Karavaev, I.B. Polyakova, M.K. Solntsev, T.P. Yurina 335

Magneto-optic measurements of spectral holes
R. Purchase, E. Krausz, B.E. Williamson 339

Analysis of electron correlation and vibronic coupling in the reaction center of bacterial photosynthetis
P.O.J. Scherer 344

Dynamics of the action of various physical and chemical factors on the thermoluminescence of photosynthetic systems
M.K. Solntsev, H.P.F. Ekobena, V.A. Karavaev, T.P. Yurina 349

Energy and charge transfer dynamics in self-organized multimolecular arrays
E.I. Zenkevich, A.M. Shulga, S.M. Bachilo, U. Rempel, J. von Richthofen, Ch. von Borczyskowski 354

Chapter 5. Energy transfer and exciton dynamics

Optical absorption of molecular aggregates with colored noise
M. Wubs, J. Knoester 359

Photo-induced ultrafast transfer phenomena in molecular complexes
D.H. Schirrmeister, F. Neugebauer, T. Renger, V. May 365

Excited-state relaxation of ultrathin MePTCDI films interacting with inorganic substrates
U. Gómez, H. Port, H.C. Wolf 368

Fluorescence quenching of the Nd^{3+} ions in different optical centers in fluorite-type crystals
Y.V. Orlovskii, T.T. Basiev, S.A. Abalakin, I.N. Vorob'ev, O.K. Alimov, A.G. Papashvili, K.K. Pukhov 371

Energy transfer in polymers in dilute solutions
I.M. Sokolov, J. Mai, A. Blumen 377

Optical-microwave study of electron–exciton dynamics in undoped GaAs/AlGaAs quantum wells
M. Kozhevnikov, B.M. Ashkinadze, E. Cohen, Arza Ron 381

Dynamics of triplet excitations of carbonyl compounds in porous matrices
S.A. Bagnich 385

Formation of self-trapped excitons through stimulated recombination of radiation-induced primary defects in alkali halides
B. Berzina 389

Towards memories for Förster-like exciton transfer
V. Čápek 392

Growth and photoluminescence spectra of C_{60} single crystals
V. Capozzi, M. Santoro, G. Celentano, H. Berger, G.F. Lorusso 395

Incoherent transfer in restricted geometries and moving potentials
P. Chvosta, P. Reineker 399

Ultrafast electron transfer of betaine-30
R. Scholz, M. Darwish, M. Schreiber 404

Luminescence of biexcitons in silver halide crystals
L. Grigorjeva, D. Millers, V. Pankratov 408

Excitation transfer in $CaF_2:Eu^{2+}$, Sm^{2+} multilayered structures grown by MBE on Si(1 1 1)
G.T. Warren, S.A. Homstrom, N.L. Yakovlev, W.M. Yen, W.M. Dennis 411

Excitation dynamics in α-sexithiophene single crystals and UHV-grown films
M. Hopmeier, R.N. Marks, R. Michel, M. Muccini, M. Murgia, R. Zamboni, C. Taliani, G. Horowitz, F. Garnier, M. Oestreich, R.F. Mahrt 416

Electronic energy transfer between dye molecules in polymer systems
A.Z. Baran, A.A. Ivantsov, A.M. Saletsky, A.M. Tkachev 420

Phosphorescent dynamics in $SrAl_2O_4:Eu^{2+}$, Dy^{3+} single crystal fibers
W. Jia, H. Yuan, L. Lu, H. Liu, W.M. Yen 424

One-to-two-exciton transitions in molecular aggregates: Influence of the exciton–exciton interaction
G. Juzeliūnas, P. Reineker 429

Influence of phase-sensitive interaction on the decoherence process in molecular systems
D. Kilin, M. Schreiber 433

Energy relaxation of exciton states in molecular aggregates
J.P. Lemaistre 437

Excited state dynamics in sensitized photon avalanche processes
V. Lupei, E. Osiac, T. Sandrock, E. Heumann, G. Huber 441

Excited-state dynamics and optical bistability in the dimer system $Cs_3Lu_2Br_9:Yb^{3+}$
S.R. Lüthi, M.P. Hehlen, T. Riedener, H.U. Güdel 447

Two-photon resonance spectra of biexcitons in PbI_2: Contribution of coherent and incoherent processes
T. Makino, M. Watanabe, T. Hayashi 451

Effect of exciton–exciton annihilation on optical bistability of one-dimensional Frenkel excitons
V.A. Malyshev, H. Glaeske, K.-H. Feller 455

Excitation energy transfer and low-temperature anomaly in luminescence of RE^{3+} codoped PLZT ceramics
S. Murakami, M. Herren, M. Morita 460

Dynamics of electronic excitations and localized states in LiB_3O_5
I.N. Ogorodnikov, A.V. Kruzhalov, A.V. Porotnikov, V.Yu. Yakovlev 464

Exciton dynamics and energy transfer by beryllium oxide crystals with defects
K.V. Bautin, S.V. Kudyakov, I.N. Ogorodnikov, A.V. Kruzhalov, V.Yu. Yakovlev 467

Density of states and localization properties of a one-dimensional Frenkel Hamoltonian with off-diagonal disorder
A. Rodríguez, F. Domínguez-Adame, G.G. Kozlov, V.A. Malyshev 470

Energy transfer in a conjugated polymer with reduced inter-chain coupling
A. Ruseckas, M. Theander, L. Valkunas, M.R. Andersson, O. Inganäs, V. Sundström 474

Radiative relaxation of optically generated intrinsic charged centers in solid Ar
A.N. Ogurtsov, E.V. Savchenko, J. Becker, M. Runne, G. Zimmerer 478

Superexchange in porphyrin–quinone complexes
M. Schreiber, C. Fuchs, R. Scholz 482

Exciton dynamics and hidden structures of poly(di-n-hexylsilane) film: Experimental and theoretical study
S. Suto, M. Shimizu, T. Goto, A. Watanabe, M. Matsuda 486

Ultrafast self-trapping dynamics of excitons in quasi-one-dimensional halogen-bridged platinum complex
S. Tomimoto, H. Nansei, S. Saito, T. Suemoto, J. Takeda, S. Kurita 491

Photostimulable energy transfer in doped nanostructures of alkali halides
G. Vâle 495

Excitonic fs-luminescence rise in poly(phenylenevinylene), PPV
Ch. Warmuth, A. Tortschanoff, K. Brunner, B. Mollay, H.F. Kauffmann 498

Effect of uniaxial stress on dynamics of electronic excitations in alkali halides
V. Babin, A. Bekeshev, A. Elango, K. Kalder, K. Shunkeev, E. Vasil'chenko, S. Zazubovich 502

Surface diffusion of metastable krypton atoms on krypton-doped solid argon
M. Runne, G. Zimmerer 507

Chapter 6. Electron–phonon interaction and phonon dynamics

Four stages in the study of quasiparticle–phonon interactions
V.M. Kenkre 511

Quasi-electron and phonon interactions in the femtosecond time domain
W.E. Bron, A. Guerra III, C. Suárez 518

E–V energy transfer between F centers and distant OH^-/OD^- ions in CsBr crystals
V. Dierolf, E. Gustin, D. Schoemaker, F. Luty 526

Excitonic–vibronic coupled dimer: Separatrix structure, regular and chaotic behavior of the semiclassical dynamics versus full-quantum evolution
B. Esser, H. Schanz 530

Temperature dependence of the red shift and broadening of the exciton line in CdSe/GaAs laser ablated heterostructures
G. Perna, V. Capozzi, M. Ambrico, D. Smaldone 534

Nonequilibrium phonon dynamics in $LaF_3:Pr^{3+}$
H.-S. Yang, S.M. Kirkpatrick, W.M. Dennis 540

The superexchange through virtual phonons in the dynamics of elementary electron transfer from excited electronic states of aggregated molecules
V.V. Egorov 544

Comparison of the electron-phonon coupling strength of U^{3+} and Nd^{3+} in K_2LaCl_5
A. Ellens, K. Krämer, H.U. Güdel 548

The influence of local coordination ions on the optical properties of Eu^{3+} in fluoro-chloride glasses
R. Balda, J. Fernández, A.J. García, G.F. Imbusch 551

Excitonic-dimer model with oscillatory Fano damping
U. Herfort, M. Wagner 555

On the nature of ionic crystals' sonoluminescence excitation threshold: point-defect generation
V.M. Loktev, J. Khalack 560

Coherent dynamics of zone-folded acoustic phonons in GaAs/AlAs superlattices
T. Mishina, Y. Iwazaki, Y. Masumoto, M. Nakayama 564

Peierls–Holstein dimer model with coherent, squeezed oscillatory trial functions
H. Morawitz, P. Reineker, V.Z. Kresin 567

Solvent dependence of homogeneous and inhomogeneous broadenings in β-carotene solutions
R. Nakamura, A. Ishizumi, J. Watanabe, J. Nakahara 571

Transport of vibrational excitations in anharmonic lattices
D. Nevedrov 575

Transient absorption study of vibrationally excited Yb^{2+}-$[CN^-]_n$-complexes in alkali halides
V. Dierolf, J. Hoidis, D. Samiec, W. von der Osten 581

Multiphonon relaxation of the electronic excitation energy of rare-earth ions in laser crystals
K.K. Pukhov, T.T. Basiev, Yu.V. Orlovskii, M. Glasbeek 586

A mechanism of fast Frenkel-pair formation by electronic excitation in alkali halides
A.L. Shluger, K. Tanimura 591

Nonlinear dynamics of spin-boson systems: Quantum mechanical and quasi-classical treatment
R. Steib, J.L. Schoendorff, H.J. Korsch, P. Reineker 595

Quantal properties of self-localized solitons in anharmonic oscillatory systems
A. Sauerzapf, M. Wagner 599

Optical dephasing and electron–phonon interaction in β-carotene solutions
J. Watanabe, R. Nakamura, J. Nakahara 604

Hyperfine and electron–phonon splittings of F^- and H^- C_{4v} centers in $CaF_2:Tb^{3+}$
J.-P.R. Wells, Glynn D. Jones 608

Dynamical processes between triplet sublevels of metal-organic Pt(II) compounds
J. Strasser, D. Donges, W. Humbs, M.V. Kulikova, K.P. Balashev, H. Yersin 611

Anomalous hole spectra in glasses: A case for 1D dynamics?
V. Zazubovich, A. Suisalu, J. Kikas 615

Chapter 7. Spectral diffusion, multi-phonon processes, relaxation

Nonlogarithmic spectral diffusion in proteins and glasses
P. Neu, R.J. Silbey, A. Heuer, S.J. Zilker, D. Haarer 619

Phonon bottleneck effect in multiphonon non-radiative transitions of rare-earth ions
F. Pellé, F. Auzel 623

Multi-phonon relaxation of the H^- local mode in CaF_2
C.P. Davison, J.A. Campbell, J.R. Engholm, H.A. Schwettman, U. Happek 628

Lattice dynamics in disordered materials probed through optical responses
Y. Kanematsu, Y. Ichino, N. Hashimoto, T. Kushida 632

Relaxation jumps and hot luminescence of self-trapped excitons
V. Hizhnyakov, M. Selg 636

Chapter 8. Ultrathin organic films, molecular electronics

New insight in the optical properties of ultrathin oligothiophene films by epitaxial preparation
E. Umbach, W. Gebauer, A. Soukopp, M. Bässler, M. Sokolowski 641

Nonlinear optical response from excitons in C_{60}, C_{70}, and higher fullerenes
K. Harigaya 652

Ultrafast charge separation in the excited state of pyridinium-substituted anthryl-thiophenes
A. Hartschuh, H. Port, H.C. Wolf, B. Miehlich, J.M. Endtner, M.S. Vollmer, F. Effenberger 655

Non-resonant electron transfer efficiency of conjugated oligomers
A. Onipko, Y. Klymenko, L. Malysheva 658

Chapter 9. Quantum optics, spontaneous emission

Spontaneous emission of dye molecules as a function of the surrounding dielectric medium
G. Lamouche, P. Lavallard, T. Gacoin 662

Microscopic analysis of spontaneous emission in absorbing dielectrics
G. Juzeliūnas 666

Whispering gallery mode microlaser at liquid Helium temperature
F. Treussart, V.S. Ilchenko, J.F. Roch, P. Domokos, J. Hare, V. Lefèvre, J.-M. Raimond, S. Haroche 670

Population transfer in a three-level atom
M. Alexanian, S.K. Bose 674

Trapping and photon number states in a two-photon micromaser
M. Alexanian, S. Bose, L. Chow 677

Mapping of site distribution in $Eu^{3+}:YAlO_3$ on RF-optical frequency axes by using double-resonance spectroscopy
M. Yamaguchi, K. Koyama, T. Suemoto, M. Mitsunaga 681
